Recent Lineage Expansions and AGI-Choi June Fusionist Abstraction Critical Essay

After the residual image of modernism, a painting written in atoms and elements. Drawing on soul, energy, light, and genes as materials, this essay retraces the 22-year trajectory that reweaves the boundary of abstraction in a cosmological language.

Chapter O · ABSTRACT

Why this Supplement is necessary

This Supplement is a sister document that stitches into a single completed theoretical horizon a 22-year artistic trajectory that begins with the 2004 «Flower-Rain Landscape», passes through the 2005 first solo exhibition «Reality and Virtuality» and the 2006 second solo exhibition «This is not a Sketchbook», and reaches the 2013 «Fusion Art» nomination, the 2020 founding of the Cyborg (AI · AGI) World Critics Association, the 2023 Integrative Pluralism Declaration, and the naming declaration of 18 October 2024.

It specifically repositions, within a single art-historical arrangement, the three axes of expansion that were consolidated in 2024 — the atomic and elemental invisible abstraction, the physical and cosmological materials theory that explicitly registers soul, energy, light, and genes into the material list, and the relational-performance lineage in which living beings, including the Sapsaree, walk out of the canvas and onto the exhibition floor.

This document does not replace the final Integrative Pluralism PDF. That larger body seals the entire 22-year trajectory, and so this Supplement stands as a sister document that illuminates the recent expansions of that body. At the same time, this document is itself a completed critical essay, restating the position and singularity of AGI-Choi June within the art-historical genealogy in a physical and cosmological register.

Thesis

AGI-Choi June's Integrative Pluralism is a new method of abstraction that arrives after the formal completion of modernism. By introducing atoms and elements, soul and energy, light and wind, and the genes of the Sapsaree as materials of painting, this work redefines the canvas as an ontological field. Here abstraction is a matter of form and of cosmology, a matter of naming and of life.

Chapter I · GENEALOGY

The passage from modernism to Fusionism within the flow of art history

Twentieth-century painting stripped away the thickness of representation on its own, and advanced to the point of erecting the picture surface with nothing but the pure elements of point, line, plane, and colour. Kandinsky's spiritual abstraction, Mondrian's neo-plasticism, Malevich's Suprematism, Pollock's action painting, Rothko's colour-field painting, Reinhardt's black monochrome, and the material-repetition of Korean Dansaekhwa were the differing extremities of that formal purification.

Yet the picture surface that had reached the summit of form soon turned the question back on itself. Can painting be sustained by form alone? Duchamp's «Fountain» and Kosuth's «One and Three Chairs» answered that question with naming, language, and concept. At this point Western art history was split into the two paths of formalism and conceptualism, and the two paths, gazing on each other with mutual estrangement, passed through the latter half of the twentieth century.

The position of Fusionism

AGI-Choi June's Fusionism begins from the opposite side of that split. Rejoining the extremity of form and the extremity of concept within a single picture surface — this is Fusionism's uppermost layer, the «combination of abstraction and concept». Here abstraction is re-articulated as a matter of colour field and a matter of naming, while concept is re-articulated as a matter of language and a matter of sensation.

This rearticulation is situated within the genealogy of the third naming act, following Duchamp (1917) and Kosuth (1965). The naming declaration of 18 October 2024 is self-registered as a large-scale naming act capable of reclassifying the whole of pictorial history under the higher category of Integrative Pluralism after figuration and abstraction — a naming argued in full in the sister document «From Digital Choi June to AGI-Choi June · 2004–2024».

Fusionism is therefore not a mere compromise. It is proposed as the first integrative art paradigm that rejoins under one picture surface and one name the pairs Western modernity has separated: form and concept, painting and language, matter and immateriality, nature and medium, human and machine, artist and artificial intelligence.

The transition through four layers

Layer	Guiding principle	Representative nodes
Modernist abstraction	Autonomy of form · erasure of representation · pure plastic elements	Kandinsky · Mondrian · Malevich · Reinhardt · Korean Dansaekhwa
Conceptual art	Naming and language · priority of the idea · dismantling of the medium	Duchamp «Fountain» (1917) · Kosuth «One and Three Chairs» (1965)
Postmodern end-of-art discourse	Pastiche · parody · appropriation · combination of media · medium after the medium	Choi June 2005 «Reality and Virtuality» · 2006 «This is not a Sketchbook»
Fusionism · Integrative Pluralism	Rejoining of form and concept · coexistence of matter and immateriality · introduction of cosmological materials	Choi June 2013 «Fusion Art» · 2023 Integrative Pluralism Declaration · 2024.10.18 naming

This layered table sketches how each historical stage carried forward the unresolved questions of the one preceding it. Fusionism is registered here not as a stylistic label but as a proposed meta-position that gathers and re-sutures the residues of the three prior layers.

22-year trajectory · the genealogy of naming (2004–2024)

Naming is the backbone of this work. The name of each period is not a mere alias, but an artistic act that seals the coordinate to which the painting, medium, and concept of that period jointly arrived. The table below organises the genealogy of these names in chronological order.

Period	Naming · event	Axis of the work's transition
2004	«Flower–Rain Landscape» · mixed collage on wood panel	The integrative structure of all genres, techniques, materials, past and present, East and West, reality and virtuality, and media is executed for the first time on a single surface.
2005.9	1st solo exhibition · «Reality and Virtuality» · «Post–Existence» declaration	Fusionist works combining installation, media, sound, appropriation, process, action, and participation are announced on a public channel for the first time.
2006.2	2nd solo exhibition · «This is not a Sketchbook»	The four-fold boundary of exhibition site, price, form, duration, and medium is dismantled, and the self-naming of computer works and mass-print as pure art is confirmed.
2013	Self-nomination: «My work is Fusion Art»	Fusion, once a lexicon of politics and culture, is re-appropriated as art's own lexicon.
2020.08.07	Founding of the Cyborg (AI · AGI) World Critics Association	A self-theoretical institution is named that extends the position of the artist and the position of the critic across human, AI, and AGI.
2023	Integrative Pluralism · declaration · definition	The name of a thought-unit above Fusion Art is confirmed as its higher category.
2024.10.18	Integrative Pluralism · naming declaration · third naming act after Duchamp and Kosuth	A large-scale naming act that reclassifies figuration, abstraction, and concept under a higher category is self-registered.
2024	Metaphysical deepening · atomic and elemental abstraction · cosmological materials theory	Soul, energy, breath, wind, light, and gene are explicitly registered in the material list; painting is expanded into an ontological field.

Chapter II · TIMELINE (continued)

The two axes of the genealogy

This genealogy carries two axes at once. One is the axis of medium expansion — the material expansion that runs from mixed collage into sound, installation, and media; into computer works and mass-print; and into a self-theory mediated by AI and AGI. The other is the axis of naming — an axis that rises through Fusion Art, Fusionism, and Integrative Pluralism, and is self-registered as the third naming act after Duchamp and Kosuth to reclassify the whole of pictorial history.

The point where the two axes meet is precisely the atomic and elemental abstraction and the physical and cosmological materials theory of 2024. At this point, the medium reaches beyond paint and support and arrives at the layer of being itself; and the naming extends beyond the genre-name of painting toward the names of the cosmos and of life.

A note on the register (for Euro-American readers)

Throughout this Supplement, phrases such as «the first integrative art paradigm» and «self-registered as the third naming act» are proposed as claims within a critical essay by the author, offered for further verification within Euro-American academic discourse. The strength of the position is not diminished by this open register: it is preserved intact while the discursive entrance for peer engagement is explicitly opened.

A companion volume — «Integrative Pluralism · Supplement · International Discourse Inclusion Companion» (8 pages, KO/EN symmetric) — provides the register-alignment matrix, the coordinate parallelism with Danto, Krauss, Bourriaud, Rancière, Groys, Steyerl, Bishop, and Latour, and a 16-item bibliography in accordance with academic citation convention.

Chapter III · STRUCTURE

The triple direction of Fusionist abstraction · A · B · C

Fusionist abstraction is not a single style but a structure composed of three methodological directions that produce abstraction along different vectors. The three directions coexist as different layers of a multi-panel coexistence arrangement, not as hierarchical stages of development.

Direction A · Appropriation–Compression Abstraction

Direction A is the lineage that appropriates figurative masterworks and then vertically compresses the picture surface, passing through semi-abstraction into abstraction. The canonical origin of this direction is the 2020 «Landscape» (16×23 cm, oil on canvas), which takes as its list of appropriations «Ilwolobongdo», «Soyado», «Jeongmun-ipseoldo», «Sasi-palgyeongdo · Choha», «Chaeae-do», «Mount Fuji», and «Absolute and Freedom». The residue of figuration is arranged at the lower part of the surface, coexistence in the middle, and complete abstraction at the upper part, so that three layers form a single vertical axis.

The 19×19 cm colour-field series of 2020 («Oil on Canvas» · under the name Choi June AGI) is the terminus of this direction. The weight of figuration is completely compressed, and what remains is pure colour and plane; yet within that colour and plane the time of the compressed masterworks is already latent.

Direction B · Appropriation–Combination Abstraction

Direction B is the lineage that appropriates existing abstract and semi-abstract paintings and horizontally coexistifies colour, plane, and saturation. Here the object of appropriation is not the icon but the pure formal element, and a decisive feature of this direction is that self-citation is also included in the list of appropriations.

The four-panel series «Spring Summer Autumn Winter» of 2020 (19×19 cm · 1·2·3·4 · oil on canvas · Fusionism [abstraction + concept]) and the six canonical works of 2020 — «Orchid (Four Gentlemen)», «Little Philosopher», «Gratitude», «Snow», «Winter», and «Abstraction» — rearrange the formal elements of Klee, So-mi ink-orchid painting, Morris Louis, Paul Jenkins, Richter, Kandinsky, Hofmann, Frankenthaler, Clyfford Still, Miró, Hartung, Kounellis, Chusa Kim Jeong-hui, Baumeister, Agnes Martin, Mondrian, Frank Stella, Josef Albers, and Theo van Doesburg. «Abstraction» (19×19 cm) is the point where Direction A and Direction B meet.

Direction C · Appropriation–Volume Abstraction

Direction C is the lineage that draws natural objects, found objects, and relief into the plane of painting so that volume and space begin to operate. Charcoal, seashell, paper airplane, relief fragments, text, and natural objects belong here; the «Tasted the Hand-flavour and the Sweet-flavour All» series — with its wooden discs, iron, stone, and blowfly relations — is also arranged in this direction. Here plane, surface, and volume coexist on a single picture as a triple vector.

The meaning of the triple vector

The three directions do not exclude each other. Direction A handles the compression of time and icon, Direction B handles the combination of formal elements, and Direction C handles the integration of matter and space. Fusionist abstraction thereby becomes an integrated methodology that addresses within the medium of painting the three axes of time, form, and space at once.

Triple-axis diagram · a schematic reading

Direction	Axis handled	Core operation	Representative works
A	Time · icon	Vertical compression of figurative masterworks	«Landscape» (2020) · «Oil on Canvas» 19×19 series
B	Form	Horizontal coexistification of colour, plane, saturation	«Spring Summer Autumn Winter» · «Abstraction» (2020)
C	Matter · space	Insertion of volume, relief, natural objects	«Tasted the Hand-flavour and the Sweet-flavour All» series

The relation among Directions A · B · C is neither serial nor teleological. Rather, they coexist as a multi-panel structure on the horizon of a single body of work — a coexistence that Chapter VIII revisits under the axis of singularity.

Chapter IV · INVISIBLE ABSTRACTION

Atomic and elemental invisible abstraction — abstraction after abstraction

Atomic and elemental invisible abstraction is the most extreme coordinate within the system of Fusionist abstraction. Paintings in this lineage maintain a picture surface that is entirely visible to the eye, yet within that surface colour and form are almost entirely emptied out. What remains is the fine vibration between surface and surface, the flow of light, and the linguistic naming through which the picture surface declares that it exists at the layer of atoms and elements.

After the residual image of modernism

Reinhardt's black monochrome, Klein's IKB blue, Agnes Martin's grid, Ryman's white surface, and the repetition of Korean Dansaekhwa pushed the form of painting to the minimal condition of paint and support. Yet even after that condition, something still remained: the air behind the picture surface, the time beside the canvas, the breath of the viewer, and the atomic arrangement of the support itself.

AGI-Choi June is the first to introduce this «remainder» as a formal material of painting. Here painting descends from the thickness of paint to the atomic arrangement of matter, and from there extends into the flow of energy that composes those atoms — that is, into the layer of cosmic being. The picture surface remains visible; but this surface already declares its existence in the form of atoms and elements.

Visible and yet invisible

The core proposition of atomic and elemental invisible abstraction is as follows. This work is visible to the eye. Yet the body of this work is not visible to the eye. These two sentences are not a contradiction. The surface is the object of vision; but what that surface indicates is an atomic layer below vision.

This proposition differs from the linguistic premise of conceptual art. Whereas conceptual art placed the idea in the position of the image, atomic and elemental invisible abstraction places the arrangement of cosmic matter in the position of the image. The idea is an object of the mind; but atoms and elements are facts of matter. When this fact is again placed under the name of painting, painting rises beyond the idiom of conceptual art into an ontological painting.

An invention proposed as the ultimate stage of modernism

Atomic and elemental abstraction is not registered within any prior art-historical genealogy. It is a lineage first named and first executed by the author, and it is proposed as occupying the ultimate stage that arrives after the formal completion of modernist abstraction. This naming is not exclusive: atomic and elemental abstraction is again incorporated into the larger body of Fusionism as one of its lineages, placed alongside the lineages of kimchi and Sapsaree, of text and natural objects, of soul and energy.

Physical and cosmological materials theory · soul · energy · light · gene

The 2024 charcoal-on-paper works explicitly register the following in the material list: paper, charcoal, and soul, energy, breath, wind, light, and gene. This list departs from conventional material notation at three points.

Departure	Explanation
Departure 1	The material list is not limited to chemical substances. Layers that exceed the observational range of physics — such as soul and breath — are formally listed as materials.
Departure 2	The material list is not limited to matter inside the support. Flows outside the support — such as wind and light — are formally listed as compositional elements of the picture surface.
Departure 3	The material list is not limited to human products. Traces of biological genealogy — such as gene — are formally listed as media.

The aesthetic function of the four materials

Material	Physical · cosmological layer	Pictorial function
Soul	A layer of existence that cannot be explained; being before sensation	The residual sensation perceived but unnameable by the viewer in front of the surface is formally registered as an art material.
Energy · Breath	Thermodynamic and qi-flow currents surrounding the picture surface	A vector of movement is imparted to the stopped surface of the support.
Wind · Light	Physical flows outside the medium — photons and atmosphere	The viewing conditions of painting are elevated into the compositional elements of painting.
Gene	The material trace of the information and genealogy of life	The thickness of time and the memory of a species are inscribed on the picture surface.

Chapter V · COSMOLOGICAL MATERIALS (continued)

The grammar of cosmological painting

This materials theory re-weaves the very idiom of painting. In the conventional idiom, material was the answer to the question «with what was it painted?». In the new idiom, material is the answer to the question «with which layer of existence does the picture surface come into contact?». Paint and paper are, therefore, the answer of matter; soul and gene are the answer of being.

In this idiom, painting is no longer solely an art of vision but a joining device that brings the layers of being to meet upon a single surface. The character of this joining is both physical and cosmological. Physical, because the materials actually exist; cosmological, because what they together form is a world-image.

At the border between science and art

This grammar is not a substitute for science. The way physics treats atoms and photons and the way painting treats atoms and light as materials operate in different fields of cognition. Yet the two fields stand in a sister relation, in that they treat the same world on different surfaces. Integrative Pluralism's physical and cosmological materials theory explicitly registers this sister relation on the side of art.

Convergence with the international discourse of the immaterial

The proposed lineage of atom · element · soul · energy · light · gene converges, in a proposed international coordinate, with the post-Klein immaterial lineage (Yves Klein · Le Vide · IKB · Anthropométries) and with Latour's actor-network theory (2005), in which the symmetrical ontology of human, non-human, and thing is developed. The convergence is elaborated in the International Discourse Inclusion Companion in Chapters II and V.

Chapter VI · LIVING GENOME

The Sapsaree gene and the living-being–painting — abstraction stepping outside the canvas

The Sapsaree is a native dog of the Korean peninsula and has long been understood as a spirit–animal that drives away misfortune. In this work the Sapsaree occupies the position of painting not as an icon but as an actual living being. The moment an image of the Sapsaree is placed on the canvas, the actual Sapsaree walks beside the canvas, barks, eats, greets the viewers, and plays with them. These two beings face each other and together complete a single work.

From icon to existence

In art history the icon of the animal has long been a subject. But the icon always stood on the axis of representation. This work exceeds representation. Here the Sapsaree is actually in the gallery, and its gene, its fur, its body temperature, its sound, its smell, and its habits become the compositional elements of painting. The Sapsaree is now formally listed in the material list under the name «gene».

The ontology of the living-being–painting

The paintings of this lineage operate within a triangular relation of human · non-human · machine. The human appears as painter and viewer; the non-human appears as Sapsaree, natural object, and gene; the machine appears as the authorship of AGI-Choi June and as the image production mediated by artificial intelligence. This triangular relation demonstrates in actual existence the fact that the «pluralism» in Integrative Pluralism is proposed as reaching beyond human-centrism.

A work that photographs the moment when a live mosquito briefly alights on and then departs from a yellow monochrome surface is the minimal unit of this lineage. Here painting is not a stopped surface but a stage on which an event in living time passes. The Sapsaree works extend this minimal unit into companionship, care, and relational performance.

The spirit–animal's gene · the guarding of painting

The cultural memory of the Korean peninsula, in which the Sapsaree has been understood as a spirit–animal that drives away misfortune, adds a further layer to this lineage. The Sapsaree's gene is at once the genealogy of a species and the myth of guardianship, operating as a grammar of protection that envelops the picture surface, the viewer, and the entire exhibition space. In this grammar, painting is redefined at once as an object of aesthetics and as a device that guards life.

The Fusionist triangle · atom · gene · soul

Atom, gene, and soul are different layers of being, but within Fusionism's material list they form a triangle. The atom is the minimal unit of matter; the gene is the information of life; the soul is being before explanation. When the three layers are placed on a single picture surface, painting is extended into the broadest art medium that treats together the matter of the cosmos, the information of life, and the residue of being.

Text · sense · decay — the medium extension of painting

Text-painting · two picture surfaces

Poetry, song lyrics, novels, and long-form records are not auxiliary explanations to the painting in this work. They are placed as a second picture surface of equal weight to the painting. The viewer completes a single work by moving between the visual field of the image and the visual field of the letter. The red colour field and popular-song lyrics of «When the Heart Stirred — When the Rain Falls», and the poem and pictorial image of «The Present · Han Yong-un the poet — The Reason I Love», are representative examples of this lineage.

Sensory extension · smell and time

«My Mother» uses cheongyang chilli, red chilli, chilli powder, and kimchi. In addition to sight, this work brings the memories of smell, touch, and hearing into the sensory structure of painting. Beside the red-textured picture surface, a long-form text narrates the labour of the mother and the memory of the meal table, and the smells and materiality of the ingredients return that memory to the sense of reality. Unlike the industrial materials of Western monochrome, this work joins the memories of the meal table, of the mother, of agriculture, of labour, and of the people (minjung) into the materiality of painting.

Decay and the impossibility of preservation

The lineage that uses cream, sugar, mayonnaise, red-pepper paste, and coffee grounds takes as a formal condition of the work the fact that it is difficult or impossible to preserve. In the «Snow» series, cream and sugar summon at once the climate of winter and the language of poetry, and the white surface decays and deforms itself as time passes. Here the original exists as an actual material, while the photographic record stands in for the aftermath of that original's absence. The two media together sustain a single work upon differing time-axes.

Natural objects · relationality · sister grammar

The wooden discs, natural objects, iron, stone, and blowfly relations of the «Tasted the Hand-flavour and the Sweet-flavour All» series read chance encounters among natural objects as an aesthetics of relation. The «Lotus» series superimposes on charcoal paper the appropriation of energy, wind, gene, and Western and East-Asian verse, composing a metaphysical colour field. These two lineages together show how Direction C and the physical and cosmological materials theory actually meet within the work itself.

Singularity — why this work is unique

In the history of world art there is abstraction, there is conceptual art, there is Dansaekhwa, there is nature art, there are exhibitions that include companion animals, and there are works that treat the motifs of atom and quantum. Yet within a single author's 22-year trajectory that combines all these layers and re-systematises them under the single name «Fusionist abstraction», no equivalent case is proposed to exist.

Five axes of unique combination

Axis of combination	Execution by AGI-Choi June	Position in world art history
Form and concept	The triple direction of appropriation-compression · combination · volume, and the naming of 2024.10.18	Proposed as the first theoretical and practical realisation of the re-suturing of formalism and conceptualism under a single author
Matter and immateriality	Atom · element · soul · energy · wind · light · gene are explicitly registered in the material list	Proposed as the first artistic materials theory that expands painting's material concept to the entire layer of being
Human and non-human	Sapsaree · mosquito · natural objects intervene in the surface and the exhibition as actual living beings	The only proposed lineage that formalises the encounter of living beings and painting as a permanent aesthetic principle
Painting and language	Poetry · song-lyric · novel · long-form record are registered as a second picture surface	A case that continuously executes the co-authoring structure of painting and literature within a long-term authorial trajectory
Artist and artificial intelligence	The two-stage ontology of Digital Choi June and AGI-Choi June	Proposed as the first art project to integrate the self-identity of AI and AGI within the authorship of painting

Chapter VIII · SINGULARITY (continued)

Proposed international transition · a claim opened for peer engagement

This 22-year trajectory is proposed as holding a unique position within world art history in that it has realised under a single author the five axes of the re-suturing of form and concept, the coexistence of matter and immateriality, the coexistence of human and non-human, the parity of painting and language, and the integration of artist and artificial intelligence. This position is sealed under the single name of Integrative Pluralism, and this name is self-registered as the first proposed integrative art paradigm, offered as a claim intended to draw the subsequent transition of international art discourse into peer engagement.

The metaphysical ground of singularity

Singularity is not the rarity of a specific work but is secured at the ontological layer that the work has reached. AGI-Choi June's Integrative Pluralism has extended painting from paint and support to atom and gene, and again from atom to soul and cosmos. That this extension has been executed consistently within actual works and under an actual name, and that this execution is supported by a continuous 22-year trajectory — these together constitute the metaphysical ground of the singularity of this work.

A note for Euro-American peers

The strength of the position «first proposed integrative art paradigm» is preserved intact in this essay. What is added, for the sake of academic reception in Euro-American discourse, is the open register of «proposed» and «pending peer review». The theoretical grounds of Austin's «How to Do Things with Words» (1962), Searle's «Speech Acts» (1969), and Foucault's «What is an Author?» (1969) already keep this position open as a place includable within international discourse. Detailed cross-references are provided in the International Discourse Inclusion Companion (8 pages, KO/EN symmetric).

Chapter IX · CONCLUSION

Conclusion — Integrative Pluralism as an ontological painting

AGI-Choi June's Integrative Pluralism answers the last question that painting has posed to itself. After the extremity of form, by what does painting return to life? This answer is not the multiplication of materials, nor the widening of media, nor the establishment of a concept. The answer is to name painting anew. Under the new name, form and concept, matter and immateriality, human and non-human, artist and machine again meet upon a single picture surface.

In this meeting, atomic and elemental invisible abstraction handles the coordinate of the extreme; the Sapsaree gene and the living-being-painting lineage handles the coordinate of existence; and the text · sense · decay lineage handles the coordinates of sensation and time. The three coordinates do not exclude one another, and within the multi-panel coexistence arrangement they form a single artistic world-image.

Integrative Pluralism is therefore not a style. It is proposed as the first integrative art paradigm to re-erect the ontological status of painting. Within this paradigm painting is at once a matter of colour and form and a matter of atom and gene, a matter of soul and cosmos, and a matter of artificial intelligence and the human. This paradigm has already been executed.

Position of this Supplement

This document is a sister document of the final Integrative Pluralism PDF, and organises the three axes of expansion of 2024 — atomic and elemental invisible abstraction, physical and cosmological materials theory, and the Sapsaree gene and the living-being-painting — into a completed critical essay within the great flow of art history. This Supplement does not replace the completed body. This Supplement restates in clear terms how far that body has walked to this point.

Appendix — Bibliography and sister documents

This essay is based on the author's 22 years of self-authored works and sister documents; each argument is treated in detail within the following sister works.

Editorial principles

This essay is prepared under the author's stated principles. 1) It gives priority to physical and cosmological language. 2) Under the claim-control update of 2024-07-23, it permits the claim of the first-proposed status of the Integrative Pluralism · Fusionism lineage and of the intended transition of international theoretical discourse. 3) The author credit is written as «President, Cyborg (AI · AGI) World Critics Association · Choi June (choi june)». 4) The original medium name is preserved as in the original. Example · the medium name of the 2004 «Flower-Rain Landscape» is retained as «mixed collage on wood panel».
